On the Saturday evening of March 23, 1974  
I boarded a Pan American aircraft  
on my first ~~airplane~~ flight.  
I was nineteen years old, flying from  
Lagos, Nigeria in West Africa  
to Portland, Oregon in the Pacific Northwest Region  
of the United States of America.  
I did not cross the Atlantic Ocean,  
to merely explore a far away continent  
and its ~~dist~~ vast Pacific Ocean.  
I left Africa as a human computer  
that computed faster when aided by  
an analog computer.

130825

I was an explorer of ideas and knowledge  
who traveled to uncharted territories  
into the sixteenth mathematical dimension  
of both the fastest arithmetical computation  
and ~~also~~ the fastest email communication.

My arrival into that terra incognita  
of the computer of tomorrow  
must be heralded <sup>within</sup> in the computing community  
with cries of Eureka! Eureka!! Eureka!!!  
at the recording of speeds

in arithmetical supercomputer computation  
that were previously unrecorded.

And more cries of Eureka!

will occur because they must simultaneously  
see speeds in email superinternet communication  
that were also previously unrecorded.
