On the Saturday evening of March 23, 1974
I boarded a Pan American aircraft
on my first ~~airplane~~ flight.
I was nineteen years old, flying from
Lagos, Nigeria in West Africa
to Portland, Oregon in the Pacific Northwest Region
of the United States of America.
I did not cross the Atlantic Ocean,
to merely explore a far away continent
and its ~~dit~~ vast Pacific Ocean.
I left Africa as a human computer
that computed faster when aided by
an analog computer.

130825

I was an explorer of ideas and knowledge
who traveled to uncharted territories
into the sixteenth mathematical dimension
of both the fastest arithmetical computation
and ~~also~~ the fastest email communication.

My arrival into that terra incognita
of the computer of tomorrow
must be heralded ^{within} in the computing community
with cries of Eureka! Eureka!! Eureka!!!
at the recording of speeds

in arithmetical supercomputer computation
that were previously unrecorded.

And more cries of Eureka!

will occur because they must simultaneously
see speeds in email superinternet communication
that were also previously unrecorded.
